

# PRAIRIE VIEW A&M UNIVERSITY

A Member of the Texas A&M University System

To our Incoming Freshman:

As Dean, I would like to extend to you *Congratulations* on being accepted to Prairie View A&M University and the Roy G. Perry College of Engineering. Pursuing a career in engineering, computer science and/or technology is rewarding yet challenging. We believe that the College offers academic programs that are grounded in the fundamentals of science and mathematics as well as a variety of academic enrichment programs that are needed for our students to be successful and eventually highly marketable. Our programs are known for their rigor, our students are challenged academically, and those that earn a degree here have a right to be proud of their accomplishments. The College has a strong legacy in producing some of the brightest engineers, computer scientists, and technologists in the world and continues to strengthen its programs in order to meet the scientific and technological needs of our global society.

This summer, the College will offer a five-week residential program designed to bridge the transition for students from high school to college. The *College of Engineering Enhancement Institute (CE<sup>2</sup>I)* is open to all incoming freshman students who will attend Prairie View in the fall and major in a discipline offered by the College (engineering, computer science or technology). This program is a great opportunity for our students to meet and be taught by some of the most talented faculty that our University has to offer and the opportunity to interact with other students who have common interests. I would like to encourage each of you to take advantage of this wonderful opportunity and complete and return the application materials that are enclosed in this packet. Space is limited to the first sixty (60) applicants, so your prompt attention is required. We are committed in the Roy G. Perry College of Engineering to ensuring the success of ALL our students by providing every opportunity to enrich and strengthen their academic and professional growth. This program is a critical step in the development of our students and preparation for the career in which they've chosen.

In closing, the Roy G. Perry College of Engineering is well established and capable of educating the engineer, computer scientist and/or technologist of the twenty-first century. Once again welcome to the College of Engineering, where we believe in the motto "Imagine the possibilities....." and your possibilities begin now.

I look forward to meeting each of you and if there is anything that my office can provide for you, please do not hesitate to contact us either by phone 936-261-9890.

Sincerely,

Kendall T. Harris, Ph.D., P.E.  
Dean
