

PRAIRIE VIEW A&M UNIVERSITY

The Writing Center Presents:

**Research Techniques:
Gathering Credible Sources**

Developed by Ayana Young

What are credible sources?

- **How do I know if a source is credible?**
 - You can ask the following questions to determine if a source is credible:
- **Who is the author?**
 - Credible sources are written by authors respected in their fields of study. Responsible, credible authors will cite their sources so that you can check the accuracy of and support for what they've written. (This is also a good way to find more sources for your own research.)

Questions about credibility

- **How recent is the source?**
 - The choice to seek recent sources depends on your topic. While sources on the American Civil War may be decades old and still contain accurate information, sources on information technologies or other areas that are experiencing rapid changes need to be much more current.
- **What is the author's purpose?**
 - When deciding which sources to use, you should take the purpose or point of view of the author into consideration.

Questions cont...

- Is the author presenting a neutral, objective view of a topic?
- Or is the author advocating one specific view of a topic?
- Who is funding the research or writing of this source?
- A source written from a particular point of view **may** be credible; however, you need to be careful that your sources do not limit your coverage of a topic to one side of a debate.

Questions cont...

- What type of sources does your audience value?
 - If you are writing for a professional or academic audience, they may value peer-reviewed journals as the most credible sources of information.

Questions cont...

- What type of sources does your audience value?
 - If you are writing for a group of residents in your hometown, they might be more comfortable with mainstream sources, such as *Time* or *Newsweek*.

Questions cont...

- What type of sources does your audience value?
 - A younger audience may be more accepting of information found on the Internet than an older audience might be.

Questions cont...

- Be especially careful when evaluating Internet sources!
 - Never use Web sites where an author cannot be determined, unless the site is associated with a reputable institution such as a respected university, a credible media outlet, government program or department, or well-known non-governmental organizations.

Questions cont...

- Beware of using sites like Wikipedia, which are collaboratively developed by users.
 - Because anyone can add or change content, the validity of information on such sites may not meet the standards for academic research.

What type of sources should I use?

- There are two types of research:
 - Firsthand Research
 - Secondhand Research

What type of sources should I use?

- **Firsthand Research**
 - Research you have conducted yourself such as interviews, experiments, surveys, or personal experience and anecdotes.

What type of sources should I use?

- Secondhand Research
 - Research you are getting from various texts that has been supplied and compiled by others such as books, periodicals, and websites.

What type of sources should I use?

- Regardless of what type of sources you use, they must be credible
 - reliable
 - accurate
 - trustworthy

Where to look for credible sources

- PVAMU Library Database
- Search Credible Journal Databases: EBSCO Host, JSTOR, MLA Bibliography
- Government Websites
