Configuring Our Workday

Our second Workday prototype has been successfully reviewed by the project team and system member Subject Matter Experts. This gave them a second opportunity to tweak our Workday solution so that it works for everyone across the A&M System and that it is ready to be tested.

Testing Our Workday

We will use the next several months to do three types of testing on our Workday solution to make sure it will be ready to go in December 2017.

- **System Integration Testing**
  An end-to-end test to check that individual components like our business process steps, integrations, and our employee's data are working together the way we want them to.

- **Payroll Comparison Testing**
  A side-by-side comparison of BPP and Workday will confirm that your paycheck will be correct.

- **User Acceptance Testing**
  System members check the business processes using scenarios that describe how they will use Workday each and every day.

Our Updates Our Choice

With software enhancements twice a year, we can rest assured that we are using the most current version of Workday at any given time, which is one of the reasons we chose it. While Workday will require us to use many of the new features and functions they provide, we will be able to choose if and when we include others into our solution.
