Prairie View A&M University
Chemical Engineering Department
CHEG 1021-P01: Introduction to CHEG Lab
Spring 2020 Syllabus

Dr. Sheena Reeves, Assistant Professor
Office: 201D C.L. Wilson Phone: 936-261-9413
smreeves@pvamu.edu
Office Hours: W 11 - 2 p.m.; R 11:00 - 1:00 p.m.

COURSE
Meeting Time: T 3:00 – 5:50 p.m.
Location: S.R. Collins 225
Prerequisites: N/A

References:

Overview: This course will introduce freshmen to chemical engineering as a field of study and professional practice and explore the role of chemical engineers in society and the importance of chemical engineering in our daily life. To provide freshmen an understanding of the basics of engineering activities and become familiar with engineering terminology, methods, and tools used by engineers and engineering companies in accordance with ABET.

Description: (1-0) Credit 1 semester hours. Introduction to the field of engineering, industries, careers, and the curriculum. Basic engineering terms, concepts, calculations problem solving skills, ethics, and computer applications.

Outcome: This course will be assessed using the fundamental outcome 8.
1. identify, sketch, or discuss concepts associated with chemical engineering.
2. formulate fundamental chemical engineering concepts such as mass, mole, composition, density and molecular weight.
3. solve fundamental chemical engineering problems using engineering problem solving strategies and computer applications software.

GRADING POLICY

<table>
<thead>
<tr>
<th>Item</th>
<th>Points</th>
<th>Grade Scale:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Homework</td>
<td>200</td>
<td>A = 1000 - 900</td>
</tr>
<tr>
<td>Class Activities/Projects</td>
<td>300</td>
<td>C = 799 - 700</td>
</tr>
<tr>
<td>Midterm</td>
<td>250</td>
<td>F = 549 or below</td>
</tr>
<tr>
<td>Final</td>
<td>250</td>
<td></td>
</tr>
<tr>
<td>Complete Course Notebook</td>
<td>Extra 50</td>
<td></td>
</tr>
</tbody>
</table>

A signifies that the student has mastered the subject matter and understands all concepts covered.
B signifies that the student has a good understanding of the subject matter with few exceptions.
C signifies that the student has an adequate understanding of the material and can follow most concepts.
D signifies that the student does not understand important class concepts needed to be successful in future courses.
F signifies that the student has missed significant assignments or does not understand several concepts.
TESTS & TESTING POLICY

- All tests are closed book and closed notes.
- NO MAKE-UP EXAMS WILL BE GIVEN. A missed exam due to an excusable absence will not be added into the students Test Average; instead, only two tests will count for that student. NO EXCEPTIONS!
- No electronic device will be allowed including iPads and eReaders.
- No graphing or programmable calculators are allowed for any test or quiz. Students must purchase a small scientific calculator to use on exams. A cell phone cannot be used as a replacement for a calculator on an exam. Doing so will result in a zero.
- No bathroom breaks are allowed during a test. If a student leaves the room during this time, their exam/quiz will be collected and considered finished by the student.
- Any act of cheating will result in a grade of zero for that student, and the student will be referred to the department head. Such meetings must take place within a week of the violation.

HOMEWORK POLICY & GUIDELINES

- This course involves the usage of computer software. Several individual and group assignments will be given throughout the semester.
- Specific homework assignments will be given throughout the semester as the instructor examines the specific need of the class.
- Students must submit these assignments BEFORE the beginning of class.
- If a student chooses to disobey the university’s honor code and copy the solution manual instead of submitting the student’s own independent work, the student will receive a grade of zero on the assignment and will be referred to the department head. Such meetings must take place within a week of the infraction.
- All homework assignments must be submitted on engineering paper.
- Write only on the front of the paper.
- Staple assignment if it is more than one page.
- Write your name, date, and assignment number on the front page.
- Number your pages! From time-to-time, students staple the pages out of order.
- Homework is due at the beginning of the class period. Late homework assignments will NOT be accepted!

CLASS ACTIVITIES AND PARTICIPATION GRADES

- Students are expected to attend class on a regular basis and are expected to participate in classroom discussions. A student who fails to attend class is risking a poor mark in this area.
- There are zero opportunities to makeup a class activity.
- Students must submit these assignments during a given time frame.

FINAL EXAM PROCEDURES

- The comprehensive final exam is closed book.
- All students are required to take the final exam. No exemptions are given.
- It is the student’s responsibility to arrive on time for the exam with all of the needed materials.

UNIVERSITY RULES AND PROCEDURES

Disability statement (See Student Handbook)
Students with disabilities, including learning disabilities, who wish to request accommodations in class should register with the Services for Students with Disabilities (SSD) early in the semester so that appropriate arrangements may be made. In accordance with federal laws, a student requesting special accommodations must provide documentation of their disability to the SSD coordinator.

Academic misconduct (See Student Handbook)
You are expected to practice academic honesty in every aspect of this course and all other courses. Make sure you are familiar with your Student Handbook, especially the section on academic misconduct. Students who engage in academic misconduct are subject to university disciplinary procedures.

Forms of academic dishonesty
1. Cheating: deception in which a student misrepresents that he/she has mastered information on an academic exercise that he/she has not mastered; giving or receiving aid unauthorized by the instructor on assignments or examinations.
2. Academic misconduct: tampering with grades or taking part in obtaining or distributing any part of a scheduled test.
3. Fabrication: use of invented information or falsified research.
4. Plagiarism: unacknowledged quotation and/or paraphrase of someone else’s words, ideas, or data as one’s own in work submitted for credit. Failure to identify information or essays from the Internet and submitting them as one’s own work also constitutes plagiarism.

Nonacademic misconduct (See Student Handbook)
The university respects the rights of instructors to teach and students to learn. Maintenance of these rights requires campus conditions that do not impede their exercise. Campus behavior that interferes with either (1) the instructor’s ability to conduct the class, (2) the inability of other students to profit from the instructional program, or (3) campus behavior that interferes with the rights of others will not be tolerated. An individual engaging in such disruptive behavior may be subject to disciplinary action. Such incidents will be adjudicated by the Dean of Students under nonacademic procedures.

Sexual misconduct (See Student Handbook)
Sexual harassment of students and employers at Prairie View A&M University is unacceptable and will not be tolerated. Any member of the university community violating this policy will be subject to disciplinary action.

Attendance Policy
Prairie View A&M University requires regular class attendance. Excessive absences will result in lowered grades. Excessive absenteeism, whether excused or unexcused, may result in a student’s course grade being reduced or in assignment of a grade of “F”. Absences are accumulated beginning with the first day of class.

Student Academic Appeals Process
Authority and responsibility for assigning grades to students rests with the faculty. However, in those instances where students believe that miscommunication, errors, or unfairness of any kind may have adversely affected the instructor's assessment of their academic performance, the student has a right to appeal by the procedure listed in the Undergraduate Catalog and by doing so within thirty days of receiving the grade or experiencing any other problematic academic event that prompted the complaint.
Course Outcome 1: This outcome is the same as program outcome 8. Students will have an ability to identify, formulate, and solve fundamental engineering problems by applying principles of engineering, science, and mathematics.

The two performance criteria used to assess this outcome consist of

1. **Ability to identify, sketch, or discuss concepts associated with chemical engineering.**
   Students are able to:
   (i) Discuss or present the role of engineers in society, career opportunities, career paths, job environment, and performance expectations.

   (ii) Discuss the ethical and professional responsibilities of chemical engineers.

   (iii) Describe the different chemical processes and how the processes operate.

   (iv) Effectively communicate ideas using both oral and written communications while avoiding dishonesty and plagiarism.

   (v) Prepare a simple report discussing in class experiments.

   (vi) Create a process flow diagram, flow chart, or Gantt chart using Visio.

2. **Ability to formulate fundamental chemical engineering concepts such as mass, mole, composition, density and molecular weight.**
   Given a problem, the student is able to:
   (i) Perform unit conversions given a conversion table.

   (ii) Convert a given value from mass to moles or moles to mass using molecular weight.

   (iii) Write values using the correct number of significant figures.

   (iv) Depict a number using scientific notation.

3. **Ability to solve fundamental chemical engineering problems using engineering problem solving strategies and computer applications software.**
   Given a problem, the student is able to:
   (i) Input formulas and perform calculations using Excel or Matlab.

   (ii) Calculate mass fractions or mole fractions given mass/mole amounts.

   (iii) Determine an unknown species through a hands-on density calculation based on measured mass and volume.
