LECTURES

- 2016 **Guest Lecture**
Architectural Department, University of Houston, Texas, United States
Topic: Technology and Design Integration

RESEARCH INTEREST

With advanced expertise in both architecture and public health, Xu focuses on design and research that integrates health, sustainability, and the built environment to enhance the quality of life at both individual and community levels. Her research portfolio includes health-oriented community planning, optimization of natural light, energy efficiency strategies, and the promotion of outdoor physical activities. The research populations of interest encompass individuals affected by obesity, mental health disorders, cardiovascular diseases, respiratory conditions, autism, and other related health concerns.

AWARDED GRANT PROPOSALS

- 2024-2026 **PI (Multiple-PI with Lu)**
Examining the Influence of Environmental Interventions on Health and Behavioral Outcomes of Children with Autism
PRISE. \$40,000
This proposed project aims to develop the Autism-Friendly Inclusive Environment framework, identify potential AFIE approaches, and examine the effects of multiple AFIE interventions on the physical, mental, and behavioral outcomes of children with ASD and their caregivers.

RESEARCH AND DESIGN PROJECTS

Autism-Friendly Community Research Design Project

Specializing in the design of inclusive environments for individuals with autism spectrum disorder (ASD), my research focuses on optimizing physical spaces to enhance the daily living, working, and learning experiences of autistic children. This includes investigating the effects of noise interference, lighting, green spaces, and the role of outdoor activities, all grounded in evidence-based data.

2019 **Oasis Autism Community. Galveston, Texas, United States**

Research Question: What factors influence the design of an autism-friendly built environment to better support the daily living, working, and educational needs of children with ASD?

Healthcare Research Design Projects

My research and design specialize in spatial arrangement, architectural form, and integrated environments designed to alleviate work-related stress, improve work efficiency, and provide a calming environment for patients. My research focuses on noise control, daylighting applications, green spaces, and indoor and outdoor activities.

2018-2020 **Ben Taub Emergency Center Renovation. Houston, Texas, United States**

Research question: What design strategies can improve the patient waiting experience?

2018 **LBJ Hospital Oncology Center. Houston, Texas, United States**

Research question: What design strategies can enhance comfort and alleviate stress for patients undergoing radiology therapy?

Healthy Community Research Design Projects:

My research and design work focuses on improving community health by fostering physical activity, enhancing environmental quality, and addressing environmental factors that influence health behaviors associated with chronic diseases, such as obesity.

2006 **2010 Shanghai World Expo Axis and Underground Space. Shanghai, China**

Research Question: How does the underground space convert to an outdoor active space to enhance the healthy activity environment?

2007 **Urban Lighting Master Plan for Nanjing West Road, (2007) Shanghai, China**

Research Question: What risk factors do street illumination present that affect road transportation safety?
